

Name: Indala Sri Vyshnavi
Course: Python Programming
Week: 1

1) Temperature Converter:
Convert Celsius ↔ Fahrenheit using functions.

Program:

```
def celsius_to_fahrenheit(c):  
    return (c * 9/5) + 32  
def fahrenheit_to_celsius(f):  
    return (f - 32) * 5/9  
c = float(input("Enter Celsius: "))  
print("Fahrenheit:", celsius_to_fahrenheit(c))  
f = float(input("Enter Fahrenheit: "))  
print("Celsius:", fahrenheit_to_celsius(f))
```

Output: Enter Celsius: 25
Fahrenheit: 77.0
Enter Fahrenheit: 77
Celsius: 25.0

2) Student Grade Calculator:
Take marks as input, calculate average & assign grades.

Program:

```
marks1 = float(input("Enter marks for Subject 1: "))  
marks2 = float(input("Enter marks for Subject 2: "))  
marks3 = float(input("Enter marks for Subject 3: "))  
average = (marks1 + marks2 + marks3) / 3  
if average >= 90:  
    grade = "A"  
elif average >= 80:  
    grade = "B"  
elif average >= 70:  
    grade = "C"  
elif average >= 60:  
    grade = "D"
```

```
else:  
    grade = "F"  
print("Average:", average)  
print("Grade:", grade)
```

Output: Enter marks for Subject 1: 85
Enter marks for Subject 2: 90
Enter marks for Subject 3: 80
Average: 85.0
Grade: B

3)Even/Odd & Prime Number Checker.

Program:

```
num = int(input("Enter a number: "))  
if num % 2 == 0:  
    print("Even")  
else:  
    print("Odd")  
if num > 1:  
    for i in range(2, num):  
        if num % i == 0:  
            print("Not Prime")  
            break  
    else:  
        print("Prime")  
else:  
    print("Not Prime")
```

Output 1: Enter a number: 7
Odd
Prime

Output 2: Enter a number: 10
Even
Not Prime
